# AdminBot for global room administration.

Deploy a visible in-room bot to join rooms so that the administrators can perform admin tasks in the corresponding room.

The Element Enterprise price plan allows organisations to add some extra capabilities to their version of Element. AuditBot is one of these 'Enterprise add-ons'.

AdminBot is invited to every room on a homeserver and automatically given top admin access in every room. Then the homeserver administrator can log in as AdminBot via the integrations admin page on their homeserver and automatically have admin rights in every room. An administrator uses AuditBot via Element Web (our web browser-based client). Once logged in as the AdminBot they can post messages and modify the state of any room on the homeserver.

User removed

Message deleted

AdminBot allows admins to:

✓ Kick users out of a room (kicking means they are removed from the room and will be able to request to rejoin)*

✓ Ban and unban users from a room (banning means they will be removed from the room and will not be able to rejoin)*

✓ Remove unwanted messages and uploaded files from a room

✓ Invite users in a room

✓ Change a room's title and description

✓ Close a room

✓ Act as administrator if the only admin user leaves the room

* It is not possible to kick/ban a user who are also an Admin in the room

AdminBot is available on Element Enterprise plans for an additional $1 per monthly active user.

Accredited and loved by millions.
